

UniSoft GS - Educational License Policy

UniSoft Geotechnical Solutions Ltd offers educational licenses of UniSettle 4.0 and UniPile 5.0 for Windows 7/8 to recognized universities. To be eligible, the educational institution must purchase at least one Professional/Master license of the software (a one-time purchase only). Our educational licenses are valid for one academic year but are easily renewable at no cost simply by contacting us by e-mail at support@unisoftgs.com.

Educational licenses may be installed on the university computer network for access by all students and/or on individual student computer.

Educational licenses have the same features as the Professional version except that they are slightly limited in scope. UniSettle 4.0 is limited to 10 loads where as UniPile 5.0 is limited to pile embedment of 50 meters (165 feet). The Professional/Master license provided to the educator/professor has no such limit.

For obvious reasons, direct technical support to individual students is limited and conditional on the type of request.

Please do not hesitate to contact us if you have any questions or comments regarding our software.
